INFORMATION COMPETENCE AS BOOSTER  
FOR PROSPECTIVE SCIENTISTS

# Motivation

- How can we create good learning online material.
- Problem: We cannot see users' learning strategies and correct them face-to-face.
- Visualization in our case: it is not about how to show results. It is about how to get accurate information.
- After getting and analyzing information, we can develop the contents for online learning applications.

**e-valUam: Evaluation platform based on adaptive testing**

Elige una materia:

Evaluación Global Informática Aplicada 2017

-**Statement** with explicit indication of the modifiable parameter(s).

-**Minimum and maximum values of each modifiable parameter.**

-**Programming code** (Matlab in our case) that calculates the solution to the problem.

A)

Oficina para el desarrollo de las Enseñanzas

¿A qué punto de la EDAR se recirculan los sobrenadantes que se generan en los diversos tratamientos?

¿A qué punto de la EDAR se recirculan los sobrenadantes que se generan en los diversos tratamientos?

al sedimentador primario

al lecho de gruesos

al sedimentador secundario

B)

Oficina para el desarrollo de las Enseñanzas

Responde a la pregunta planteada en el enunciado.  
Para ello debes introducir el valor correcto.

Responde a la pregunta

Calcula la concentración de sólidos en suspensión de un agua residual bruta (mg/L), sabiendo que P3,1 es 93.864 mg P3,2 102.3 mg y el volumen de muestra filtrado es de 30 mL.

Vlad Petcu y Laura Malita (West University of Timisoara). Rumanía.

Mikko Vesisenaho y Marika Peltonen (Jyväskylän Yliopisto). Finlandia.

Santiago Fort y Laia Subirats (Fundación Eurecat). Cataluña.

Abel Jiménez. (Jiménez Puertas Asesoría de Empresas). Granada.

Patricia Huion y Guido Cajot (UC Leuven-Limburg) Bélgica.

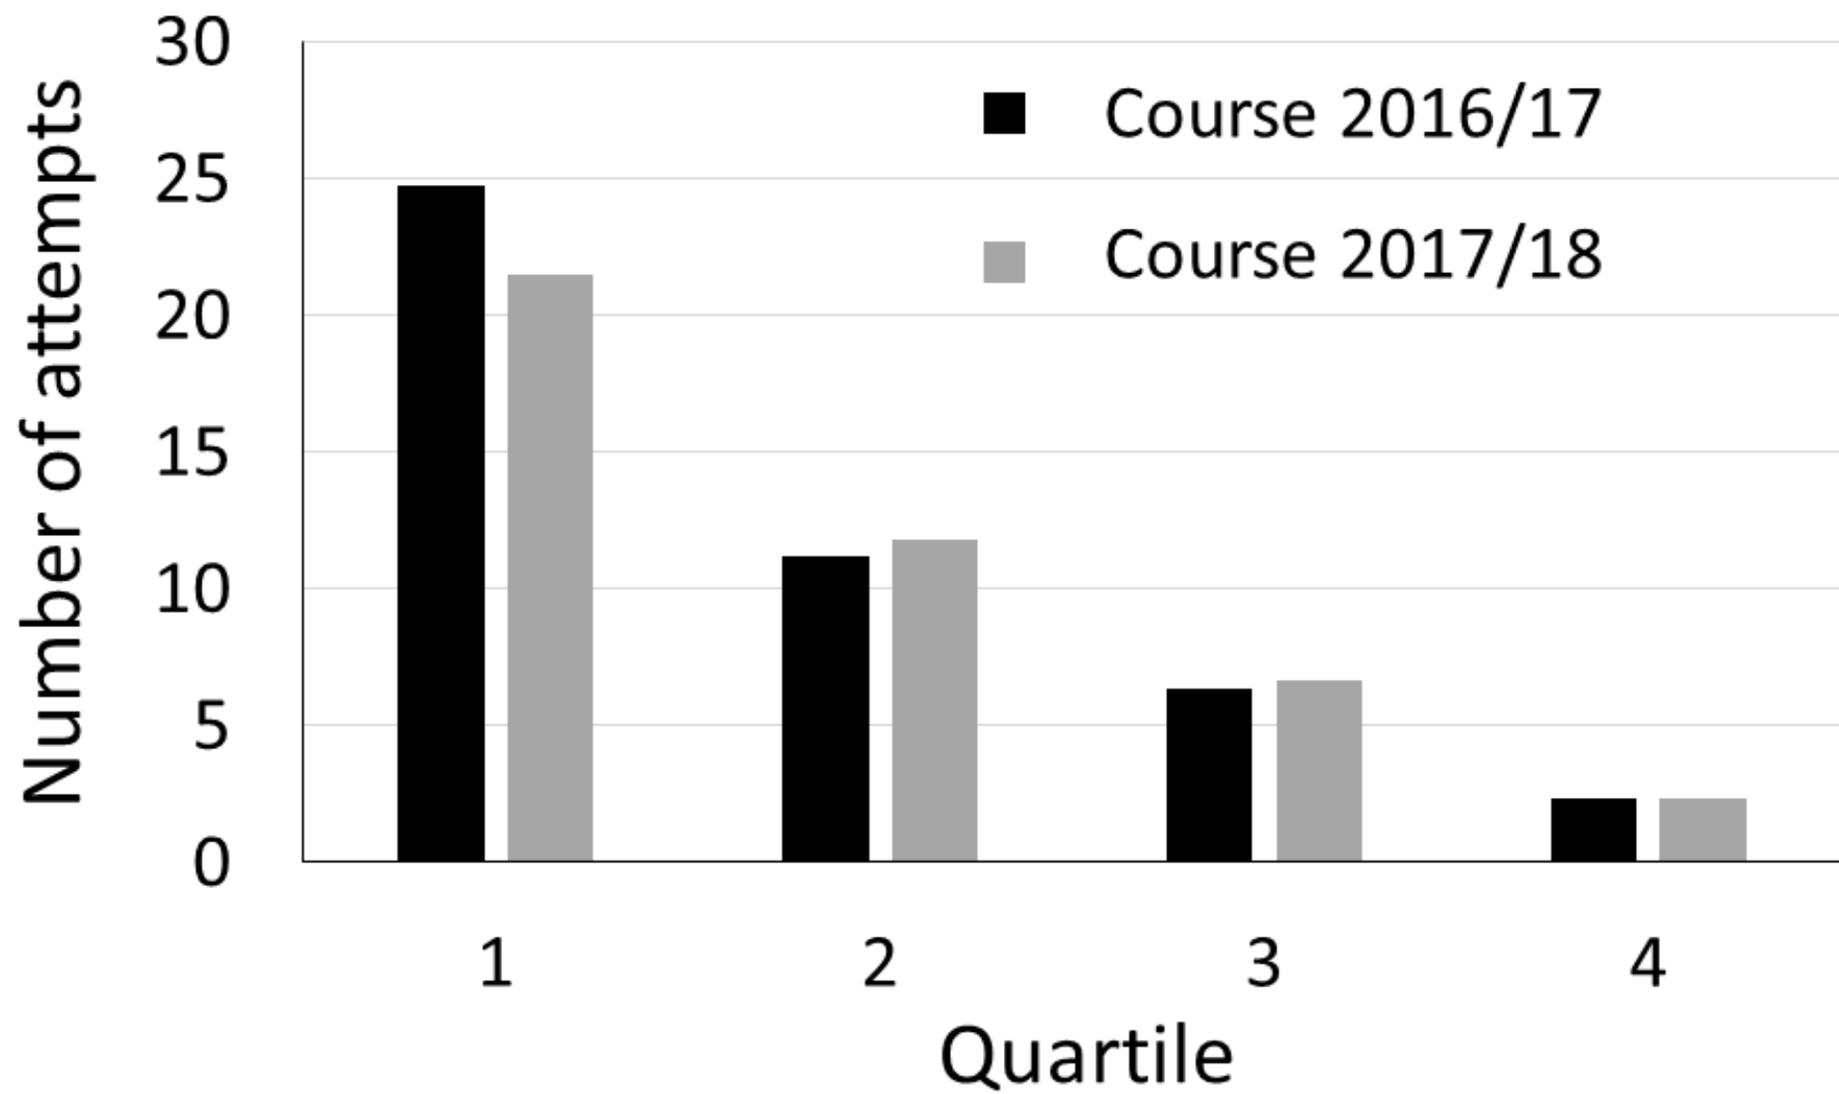

Mirela Mazalu (European University College Association). Bélgica.

Sacha Gómez. (Universidad Autónoma de Madrid). (Coordinador).

# How can we increase motivation?

- By using the same tool for self-evaluation and final exams.
- Students feel the tool very useful in their learning process because they are going to be evaluated with the same format.
- We can also detect a lot of information from students along their learning because they use the tool often.

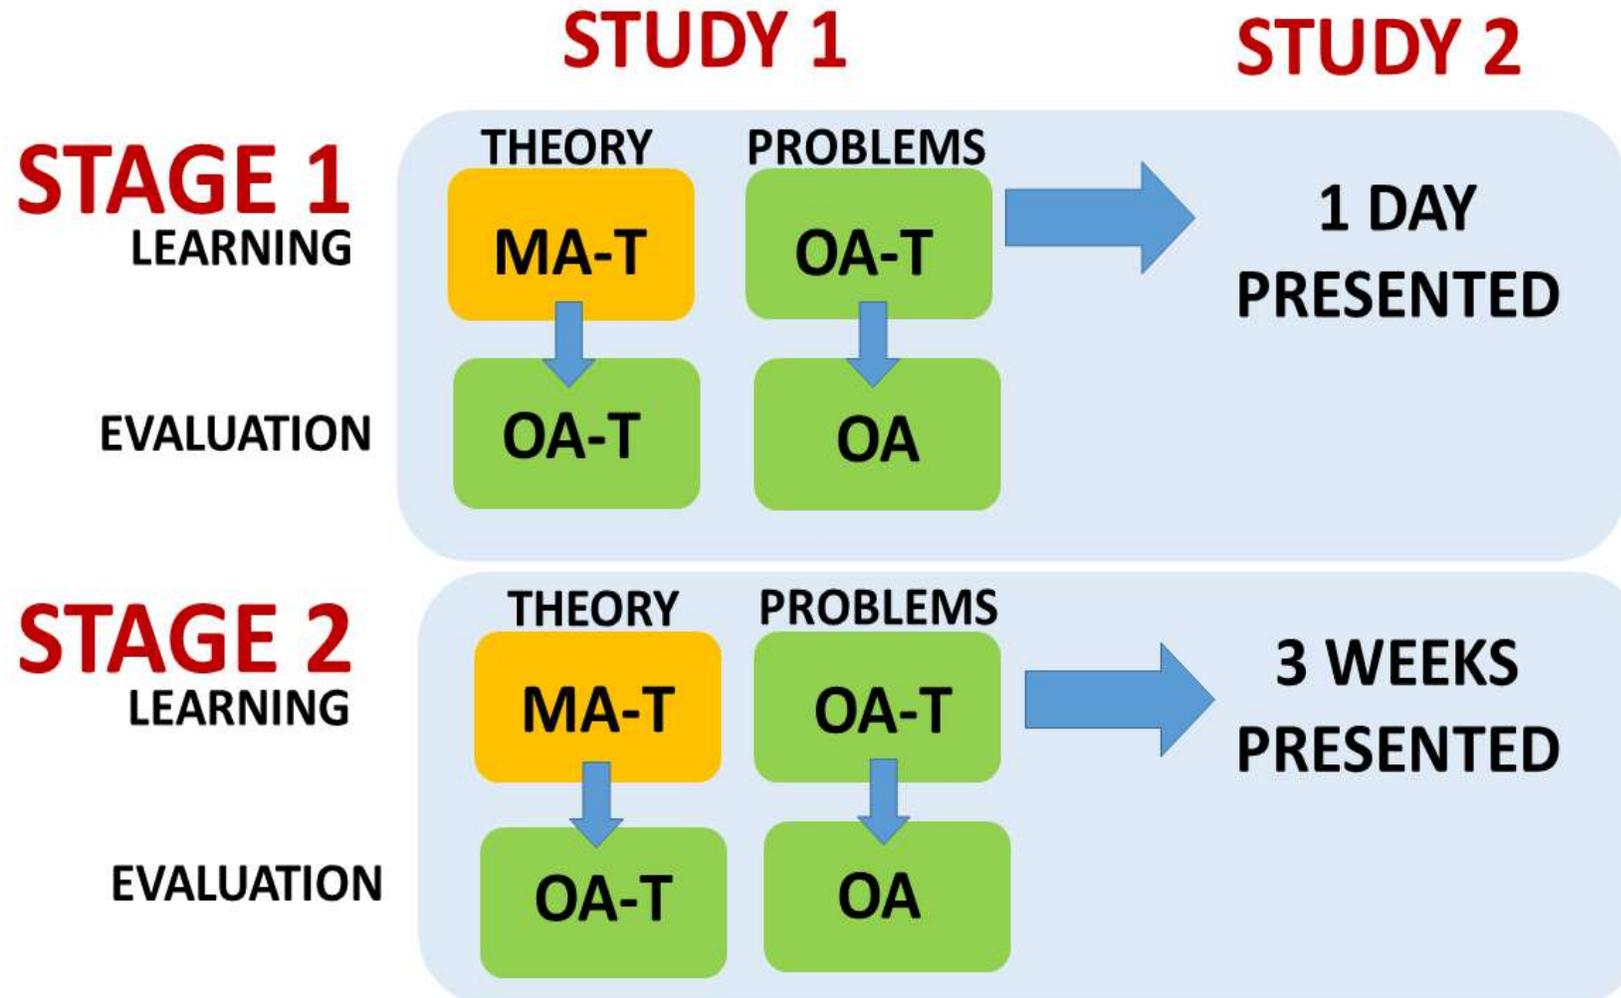

# What kind of contents fits better with our adaptive tools

- We have developed tests for many different contents with different characteristics.
- For example, subjects that only include theoretical contents vs subjects that include practical laboratory lessons.

# *Adaptive test system for subjects that simultaneously include theoretical content and numerical problem solving.*

M. Comas-Lopez, M.A. de la Rubia and G. M. Sacha.  
International Symposium of Educational Computation. Accepted 2018.

# How do we detect wrong learning strategies

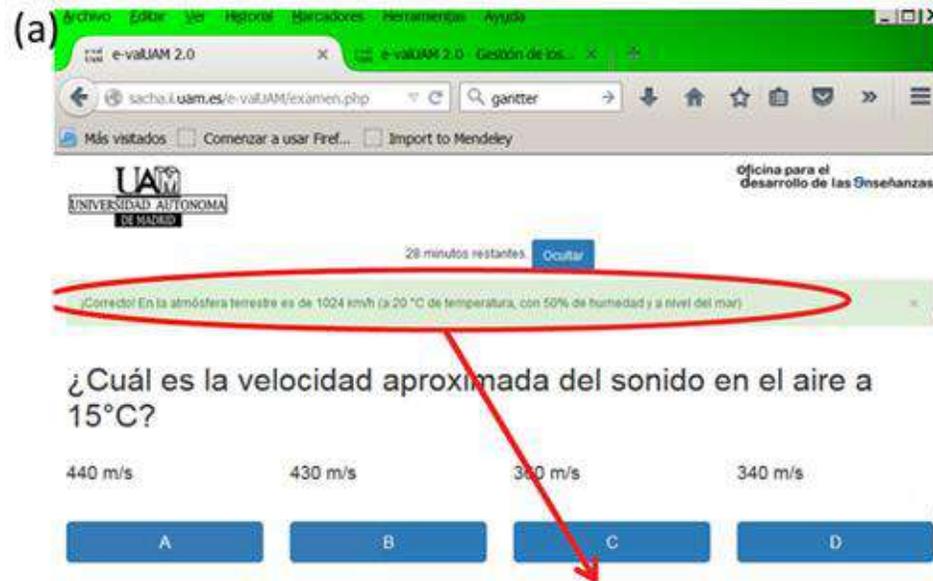

- Sometimes, students use learning tools in a wrong way.
- For example, they learn answers to the questions instead of learning contents
- We have developed an adaptive method that takes this fact into account

# *Sequential adaptive tests to improve the assimilation of contents during learning*

M. Comas-Lopez, P. Molins-Ruano, S. Atrio and G. M. Sacha.  
International Symposium of Educational Computation. Accepted 2018.

**\*Each 10 right answers advance one level**

[Preg. #26] ¿Cuál es el nombre científico de esta especie vegetal?:

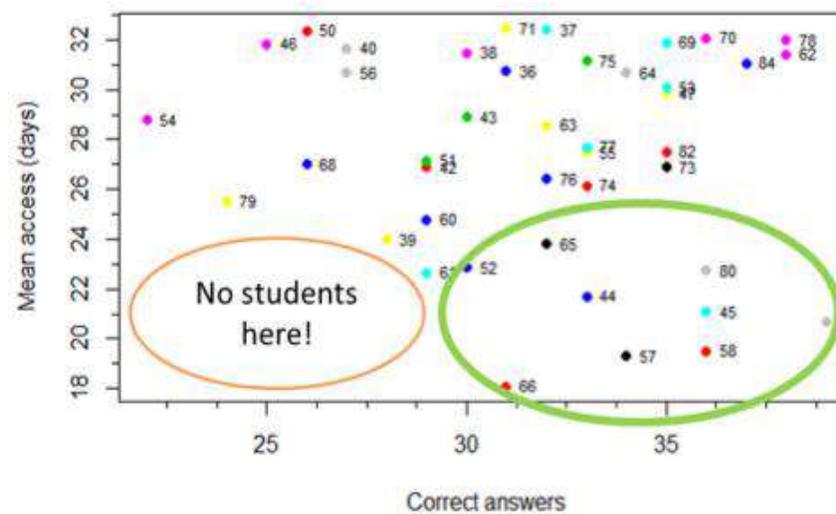

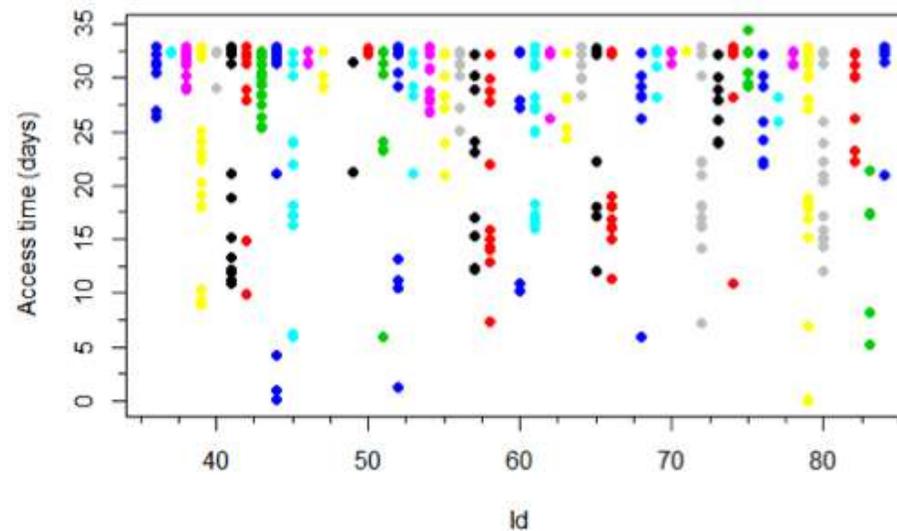

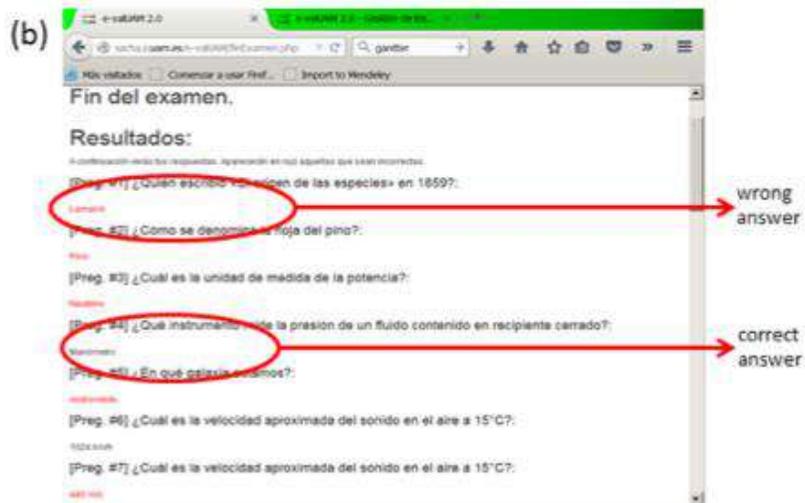

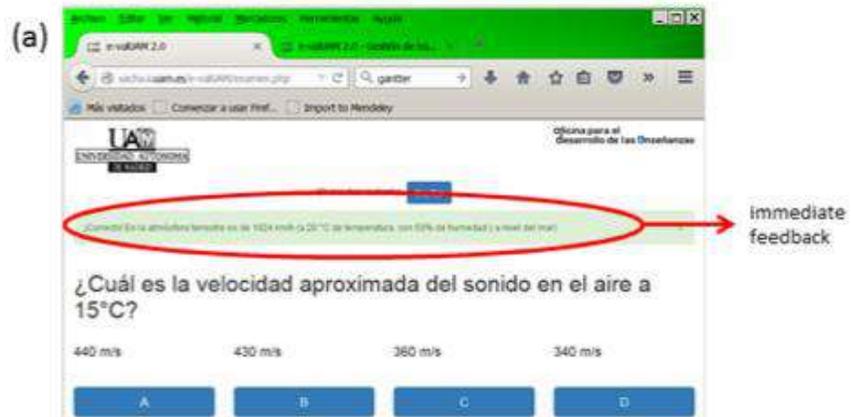

Olea mediterranea

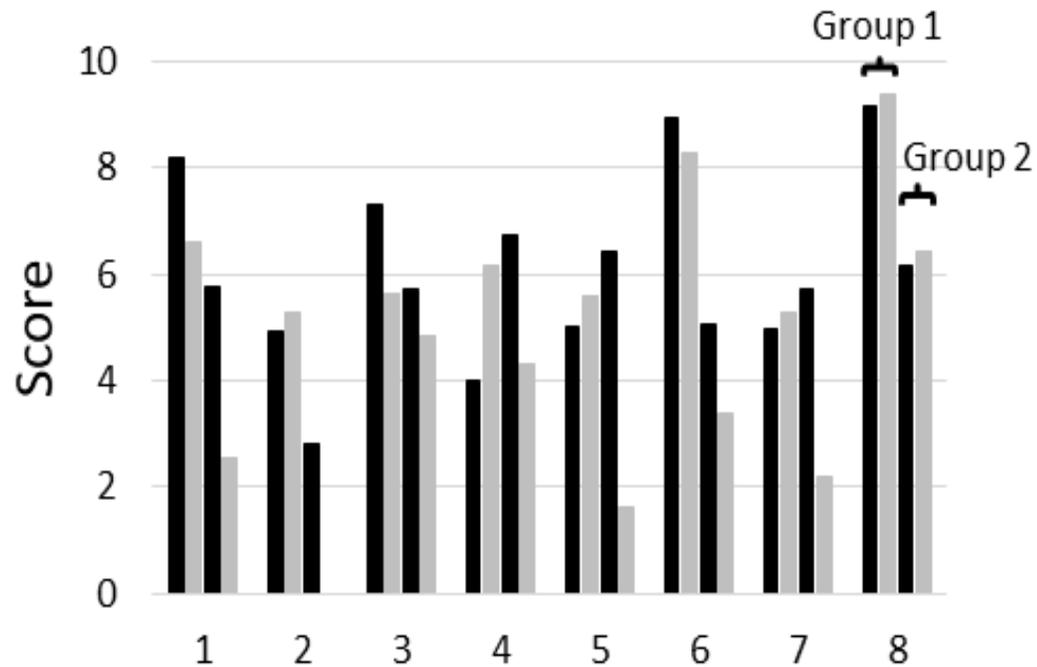

What are the most relevant parameters for a correct learning process?

What is better: teamwork or individually?

Scores (up) and score differences (down) of all the students in the 8 groups where a significant effect of the working groups has been detected. Black: Scores from the test done before the practical sessions. Grey: Scores of the final exam.

8 of the 10 groups formed, **one teammate is positively influenced** and **the other one is negatively affected**.

**Conclusion:** The pair tend to be leaded by one teammate and the other one only in passive attitude. This passive attitude has been found to be almost useless in our previous study.

# What about soft-skills?

In this case, we cannot use objective learning tools.

We have used rubrics and a peer evaluation process between students.

Elevator pitch example (video)

The Successful Elevator Pitch (2010)

Asper School of Business student Andrea Legary explains how to give a successful elevator pitch. She's a member of Asper's business team A2K Technologies, which recently won all the Alerus Entrepreneurship Challenge competitions awards: Most Innovative Idea, Best Elevator Pitch and Grand Champion. A2K also won the Lightning Round at the University of Oregon's New Venture Championship and they won the Georgia Bowl in Atlanta. The Asper School of Business has a world record 46 first-place finishes in business competitions since 1995 and A2K's successes have won them a berth into Global Moot Corp., the world championship business competition. This marks the eighth consecutive year the University of Manitoba has won a berth. The Asper School is the only Canadian school, and one of only a handful in the world, to accomplish this.
